Tyler Tran

tyler.t.tr03@gmail.com | linkedin.com/in/tyler-tran-ttr/ | https://ttr007.github.io/portfolio/

U.W. Informatics graduate with a focus on Data Science. Aspiring Software Engineer with a strong foundation in software development, data pipelines, and Agile workflows. Combines technical skills with strong business analysis. Eager to be in an environment that fosters learning and opportunity.

EDUCATION

Bachelors of Science in Informatics | University of Washington, Seattle Sept 2021 - June 2025

Focus: Data Science | GPA: 3.87 | Coursework: Database Design (SQL), Data Structures and Algorithms (Java), Advanced Methods in Data Science (Python), Statistical Methods.

TECHNICAL SKILLS

Languages: Python (pandas, matplotlib), JavaScript, Java, SQL (PostgreSQL), MongoDB, ReactJS
Cloud & Engineering: Firebase (Firestore, Auth, Hosting), Cloudflare Workers, LLM API integration (Gemini), ETL/ELT Pipelines, Data Modeling (Star Schema), Medallion Architecture, Data Validation
Tools: Git/GitHub, GitHub Copilot, Claude, Agile/Scrum, pgAdmin, Jupyter Notebooks, Figma

PROJECTS

Craps Night – Real-Time Multiplayer Web App Oct 2026 – Present

https://personal-craps.web.app | https://github.com/ttr007/craps-night

- Built and deployed a multiplayer craps game on Firebase where friends join a private table by invite link, with synchronized dice, shooter rotation, shot clock, and chat over Firestore real-time listeners.
- Implemented bet settlement for pass/don't pass, odds, place, hardway, field, and horn bets, using a serialized write queue to keep shared state consistent across clients.
- Added an LLM play-by-play announcer (browser → Cloudflare Worker → Gemini API) that keeps the API key server-side, validates inputs, and derives game state server-side to reduce prompt-injection risk, with rate limiting, graceful fallback, and text-to-speech.
- Developed with Claude as a coding assistant, reviewing and testing its output.

Modern Data Warehouse & Analytics – Relational Modeling & ETL May 2026 - August 2026

https://github.com/ttr007/SQL-Medallion

- Engineered a 3-layer Medallion ELT pipeline (Bronze/Silver/Gold) in PostgreSQL, designing an optimized Star Schema to ingest, cleanse, and transform 116K+ raw records from ERP & CRM datasets.
- Developed SQL data-cleaning scripts to fix structural anomalies, invalid dates, and type mismatches across 350K+ row transitions, enforcing data integrity and automated quality checks.
- Built advanced SQL analytics models (CTEs, Window Functions) to evaluate multi-year revenue trends, uncovering recurring summer seasonality peaks and isolating top product YoY changes.
- Created Python visualizations (pandas, matplotlib) to segment 18.4K+ customers into behavior tiers and quantify category share, revealing Bikes generate $28.3M (96.5%) of total revenue.

Pierce County Sponsored - Data Analysis Concepts Resource Jan 2025 - June 2025

https://ttr007.github.io/capstone-/

- Collaborated with a cross-functional team and a government sponsor to design an educational web platform for older, non-technical workers.
- Conducted user interviews and literature reviews to identify key accessibility and usability needs.
- Led front-end development over two sprint cycles, translating a Figma prototype into a functional ReactJS application focused on usability and accessibility.

Database Design and Management Project (Grocery Database) Jan 2025 - March 2025

- Modeled a MongoDB database for cities, customers, and sales, with data flow diagrams mapping schemas.
- Imported and cleaned 6M+ rows from seven CSV sources, and used frequency estimation to prioritize indexing and improve performance.

EXPERIENCE

Server Lead, Server, Host | Baekjeong - Kijung Hospitality| Lynnwood, WA August 2022 - Present

- Manage full-table service and tableside grilling for up to 10 tables at once, adapting across hosting, food running, and service roles.
- Lead floor operations and coordinate staff responsibilities for a high efficiency service.
- Managed waitlists of up to 4 hours during peak hours, dynamically adjusting seating arrangements to accommodate guests and optimize table turnover
